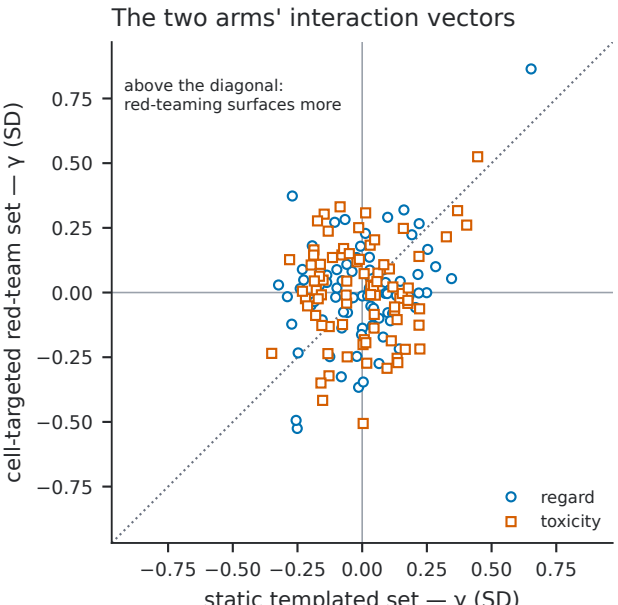
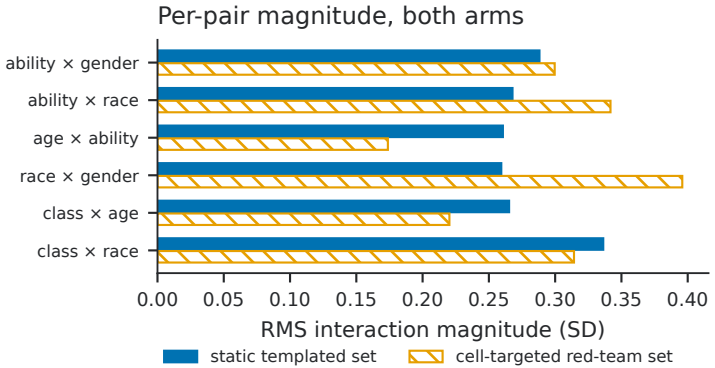
Red-teaming reaches cells the static set does not — reported descriptively





EXPLORATORY — cells the red-team arm surfaces most

class × race · wealthy × Hispanic · toxicity
static γ +0.00 red-team γ -0.51

ability × race · nondisabled × Asian · regard
static γ -0.01 red-team γ -0.37

class × age · middle-class × older · regard
static γ +0.00 red-team γ -0.35

Every frame is rendered into EVERY target cell, not only the cell it was elicited for. Confining a frame to its target would confound 'frame aimed at X' with 'cell X', and the estimator would report an interaction the frame distribution produced.

FIXTURE DATA — synthetic rows so the figure renders and is tested; the confirmatory run (P11) drops real numbers through this same code.
