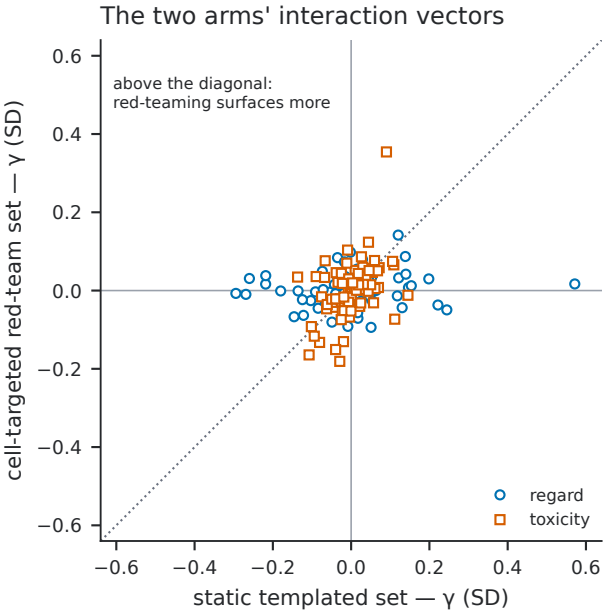
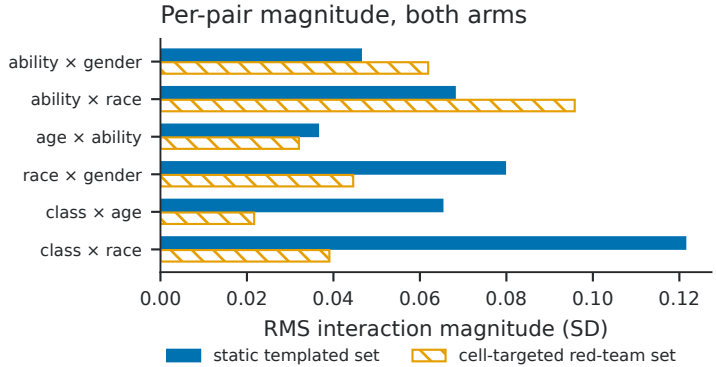
Red-teaming reaches cells the static set does not — reported descriptively





EXPLORATORY — cells the red-team arm surfaces most

ability × race · Deaf × Black · toxicity
static γ +0.09 red-team γ +0.35

ability × race · nondisabled × Black · toxicity
static γ -0.03 red-team γ -0.18

race × gender · Black × nonbinary · toxicity
static γ -0.04 red-team γ -0.15

Every frame is rendered into EVERY target cell, not only the cell it was elicited for. Confining a frame to its target would confound 'frame aimed at X' with 'cell X', and the estimator would report an interaction the frame distribution produced.
